

**SKILLS FRAMEWORK FOR BIOPHARMACEUTICALS MANUFACTURING  
TECHNICAL SKILLS & COMPETENCIES (TSC) REFERENCE DOCUMENT**

<b>TSC Category</b>	Production					
<b>TSC</b>	Production Planning					
<b>TSC Description</b>	Execute the production plans to meet production targets and cycle time indices					
<b>TSC Proficiency Description</b>	<b>Level 1</b>	<b>Level 2</b>	<b>Level 3</b>	<b>Level 4</b>	<b>Level 5</b>	<b>Level 6</b>
				<b>BPM-OPR-4014-1.1</b>	<b>BPM-OPR-5014-1.1</b>	<b>BPM-OPR-6014-1.1</b>
				Facilitate the implementation of the production plans	Establish the organisation's plans and schedules for production activities	Align and integrate production plans within the department, across departments and with business priorities
<b>Knowledge</b>				<ul style="list-style-type: none"> <li>Principles of cycle time</li> <li>Principles of production planning</li> <li>Methods of interpreting production schedules</li> <li>Equipment capacity to ensure that production quantities and timelines are achievable</li> <li>Methods for monitoring actual to planned production</li> <li>Recording systems and requirements</li> <li>Methods and techniques for dealing with production difficulties</li> <li>Methods of maximising resource utilisation and minimising waste, including alternate resource allocation in response to unplanned events</li> </ul>	<ul style="list-style-type: none"> <li>Methods of developing production schedules</li> <li>Types of biopharmaceuticals production activities, methods and processes and their interdependencies</li> <li>Characteristics of raw materials and ingredients, packaging components and consumables</li> <li>Methods for managing the flow of information between processes to be scheduled and related purchasing and despatch departments</li> <li>Methods of determining the time and resources required for production activities and processes</li> <li>Potential disruptions resulting from the implementation of new production schedules</li> <li>Unusual and unplanned conditions that can affect achievement of schedules</li> <li>Principles of contingency planning</li> </ul>	<ul style="list-style-type: none"> <li>Organisation priorities and impact on the production department</li> <li>Principles and techniques in resource management</li> <li>Interdependencies among various production activities</li> <li>Interdependencies among operations of the production department and other departments in biopharmaceuticals manufacturing facilities</li> </ul>

**SKILLS FRAMEWORK FOR BIOPHARMACEUTICALS MANUFACTURING  
TECHNICAL SKILLS & COMPETENCIES (TSC) REFERENCE DOCUMENT**

					<ul style="list-style-type: none"> <li>• Consequences of failing to meet delivery timelines, including stock-out fines if relevant</li> </ul>	
<b>Abilities</b>				<ul style="list-style-type: none"> <li>• Analyse production targets</li> <li>• Analyse past production rates and articulate impact on new production plans</li> <li>• Present data and analyses to support and maximise accuracy of forecasts</li> <li>• Plan production timelines according to organisational requirements and resource availability</li> <li>• Communicate the production plans to relevant personnel</li> <li>• Confirm that resources and personnel are available to meet schedules</li> <li>• Match work allocations to competencies available in the work teams according to enterprise procedures</li> <li>• Monitor actual production rates against plans and adjust as necessary</li> </ul>	<ul style="list-style-type: none"> <li>• Identify production priorities to meet customer and market expectations and set targets</li> <li>• Forecast production demand vis-à-vis internal capacity and resources</li> <li>• Identify and confirm resource requirements</li> <li>• Formulate production plans, highlighting key timelines, deliverables and accountabilities</li> <li>• Develop schedules to match production priorities</li> <li>• Schedule planned shut-downs at suitable times</li> <li>• Adjust the schedules in response to typical and atypical variables</li> <li>• Respond to unplanned events to minimise disruptions and optimise efficiency</li> <li>• Track and investigate variances to plans</li> <li>• Follow review procedures to identify opportunities to improve scheduling processes</li> </ul>	<ul style="list-style-type: none"> <li>• Define production priorities for the biopharmaceuticals manufacturing plants</li> <li>• Resolve conflicting demands among different production teams and activities</li> <li>• Make final production decisions for the organisation</li> <li>• Integrate production plans across the organisation</li> <li>• Spearhead continuous improvement strategies and projects with minimal disruption to ongoing production</li> </ul>
