

**SKILLS FRAMEWORK FOR MEDIA  
TECHNICAL SKILLS AND COMPETENCIES (TSC) REFERENCE DOCUMENT**

<b>TSC Category</b>	Media Technology and Operations					
<b>TSC Title</b>	Network Administration and Maintenance					
<b>TSC Description</b>	Monitor network in order to provide for optimum levels of network performance and minimisation of downtime. This includes detection, isolation, recovery and limitation of the impact of failures on the network as well as provision of support to system users through ongoing maintenance information sharing and training					
<b>TSC Proficiency Description</b>	<b>Level 1</b>	<b>Level 2</b>	<b>Level 3</b>	<b>Level 4</b>	<b>Level 5</b>	<b>Level 6</b>
		<b>MED-OUS-2009-1.1</b>	<b>MED-OUS-3009-1.1</b>	<b>MED-OUS-4009-1.1</b>		
		Monitor network performance, investigate and resolve network faults or downtime.	Review, optimise and align network performance with business needs, and program basic rules into Software-Defined Networking (SDN) applications.	Assess network capabilities and set network rules to support software-defined infrastructure and optimise performance in changing environments.		
<b>Knowledge</b>		<ul style="list-style-type: none"> <li>Assessment and analyse network performance</li> <li>Different kinds of network faults and failures</li> <li>Potential causes and impact of network faults or downtime</li> <li>Network fault detection, identification, isolation and limitation techniques</li> <li>Fault resolution techniques for a range of different network issues</li> <li>Critical information in communication of network updates to users</li> </ul>	<ul style="list-style-type: none"> <li>Impact of network performance on business operations</li> <li>Best practices in network administration and maintenance</li> <li>Priorities and dependencies in communication of network updates or information</li> <li>Concept of network virtualisation</li> <li>Programming languages for software-defined applications</li> <li>Indicators of software-defined network performance</li> </ul>	<ul style="list-style-type: none"> <li>Industry best practices in fault detection, isolation and recovery in the context of network administration</li> <li>Network resource and capability requirements to support software-defined infrastructure</li> <li>Network virtualisation management and monitoring</li> <li>Multi-tier networking</li> <li>Range of network rules and programming codes</li> <li>SDN program development</li> <li>Semantics of different networks and network types</li> </ul>
