|------------------------------------|---|---|---|--|---|----------------|
| TSC Category | Business Development | | | | | |
| TSC | Business Data Analysis | | | | | |
| TSC Description | Implement data analytics within the organisation to generate business insights and intelligence through the use of statistical and computational techniques and tools, algorithms, predictive data modelling and data visualisation | | | | | |
| TSC Proficiency Description | Level 1 | Level 2 | Level 3 | Level 4 | Level 5 | Level 6 |
| | | STP-BDV-2001-1.1 | STP-BDV-3001-1.1 | STP-BDV-4001-1.1 | STP-BDV-5001-1.1 | |
| | | Identify underlying trends and patterns in business data using statistical and computational techniques and tools | Develop, apply and evaluate algorithms, predictive data modelling and data visualisation to identify underlying trends and patterns in data | Design and conduct data studies to drive organisational decisions and insights | Manage and enhance organisational data science capability by refining financial and other business performance criteria and design data studies | |
| Knowledge | | <ul style="list-style-type: none"> Principles of data modelling and data visualisation Techniques used in data science and how to apply them Range of data protection and legal issues Range of functional languages that can be applied for business insights Methods to apply statistical techniques and machine learning Importance of the domain context for data science Underlying data structures involved for data science | <ul style="list-style-type: none"> Organisational domain(s) and key business processes Methods to use analytics to tell the story of the data Methods to use exploratory visual analysis and predictive modelling Methods to identify and prioritise the problems to be solved Methods to develop prototype algorithms Methods to build a data model Methods to use data mining to discover new business insights Methods to interpret patterns in data and their relevance to business issues Range of established and novel tools and techniques used in | <ul style="list-style-type: none"> Organisational benefits of business insights Methods to evaluate data science solutions in contributing to efficiency, growth and return on investment Methods to identify and interpret the implications of data patterns Methods to prioritise proposed data science projects Methods to approach a business problem and come up with a solution that leverages the available data Methods to run complex data mining models Methods to explore a data set visually and analytically Methods to manage the capacity to perform data science projects Application of statistics, data mining and data | <ul style="list-style-type: none"> Organisational context for data and the opportunities that data analytics can provide Business processes that use and manipulate data Methods to develop and maintain controls for data quality Methods to define and manage policies and programs for data stewardship Impact that data analysis has on business service offerings Horizon scanning methods | |
